CellPointer Quick Start Guide

v1.0.1

Numbered reference

1 View
Turn the CellPointer view on or off.

2 Header Row
Set the row containing the field names.

3 Crosshair Color
Choose the crosshair color.

4 Opacity
Adjust crosshair transparency.

5 Guide Color
Choose the Input Guide color.

6 Description
Set the description for the selected column.

7 Import
Load settings from a .cellpointer file.

8 Export
Save current settings to a .cellpointer file.

9 Open Pane
Open the CellPointer side pane to view row or column information and enter values into blank cells.

10 Crosshair
Highlights the active row and column.

11 Input Guide
Shows current field information beside the active cell.

12 Row View / Column View
Shows the current row and column as field and value pairs.

Getting Started

1. Install CellPointer using CellPointerSetup.exe.
2. Open Excel, select the CellPointer tab, turn on View, and set Header Row.
3. Select a data cell. Crosshair, Input Guide, and the side pane follow your work.
4. Use Row View for the current record or Column View to reference previous entries.
5. Blank cells can be filled from the side pane without moving the active cell.

Notes
Blank-cell input is available from the side pane. Existing nonblank values remain read-only there.
Excel Split View is
not currently supported; turn CellPointer View off while using Split View.
Requirements:
